Manulife Investment Management

Annual Management Report of Fund Performance

April 30, 2026

Manulife Climate Action Class

This Annual Management Report of Fund Performance contains financial highlights but does not contain complete annual financial statements of the Fund. You can get a copy of the annual financial statements at your request, and at no cost, by calling 1 888 588 7999, by writing to us at Manulife Investment Management Limited, 200 Bloor Street East, North Tower, Toronto, Ontario M4W 1E5 or by visiting our website at manulifeim.ca or SEDAR+ at sedarplus.ca. You may also contact us using one of the above methods to request a copy of the Fund's interim financial statements, proxy voting policies and procedures, proxy voting disclosure record, or quarterly portfolio disclosure.

A Note about Forward Looking Statements

This Management Report of Fund Performance includes certain statements that are "forward looking statements". All statements, other than statements of historical fact, included in this Management Report of Fund Performance that address activities, events or developments that the portfolio advisor expects or anticipates will or may occur in the future, including such things as anticipated financial performance, are forward looking statements. The words "may", "could", "would", "should", "believe", "plan", "anticipate", "expect", "intend", "forecast", "objective" and similar expressions are intended to identify forward looking statements. These forward looking statements are subject to various risks and uncertainties, including the risks described in the Simplified Prospectus of the Fund, which could cause actual financial performance and expectations to differ materially from the anticipated performance or other expectations expressed. Readers are cautioned not to place undue reliance on these forward looking statements. All opinions contained in forward looking statements are subject to change without notice and are provided in good faith but without legal responsibility. The portfolio advisor has no specific intention of updating any forward looking statements whether as a result of new information, future events or otherwise, except as required by securities legislation. Certain research and information about specific holdings in the Fund, including any opinion, is based upon various sources believed to be reliable, but it cannot be guaranteed to be current, accurate or complete. It is for information only, and is subject to change without notice.

Management Discussion of Fund Performance

Manulife Investment Management Limited ("Manulife IM Limited" or the "Manager") is the portfolio advisor (the "portfolio advisor") for the Manulife Climate Action Class (the "Fund").

The views of the portfolio advisor contained in this report are as of April 30, 2026 and this report is not intended to provide legal, accounting, tax or specific investment advice. Views, portfolio holdings, and allocations may have changed subsequent to this date. For current fund information, please call 1 888 588 7999, or visit manulifeim.ca.

Investment Objectives and Strategies

The Fund seeks to provide long-term capital growth by investing in global equity securities of issuers with a strong competitive advantage who are also leaders in making positive contributions to climate change mitigation.

The portfolio advisor uses a fundamental, bottom-up investment approach to select securities. The portfolio advisor believes this strategy aligns with the objective of an investor seeking to support the objective of the Paris Agreement climate target to hold the global average temperature increase to well below 2°C above pre-industrial levels and pursuing efforts to limit the temperature increase to 1.5°C above pre-industrial levels. The portfolio advisor intends to avoid investments in issuers that generate an important portion of their revenue from fossil fuel generation, mining or sale of thermal coal, alcohol, tobacco or conventional weapon.

The Fund is currently investing substantially all of its assets in units of the Manulife Climate Action Fund.

Risks

There were no significant changes to the Fund that materially affected the Fund's overall level of risk during the period. The risks of investing in the Fund and the suitability of the Fund for investors remain as discussed in the Simplified Prospectus.

Results of Operations

The Fund's Advisor Series shares returned 11.5% for the year ended April 30, 2026, versus a return of 27.3% for the Fund's benchmark, the MSCI World Net Return Index (CAD) (the "Benchmark"). Unlike the Benchmark, the Fund's return is after the deduction of its fees and expenses. The performance of shares of other series of the Fund is substantially similar to that of the Advisor Series shares except that performance will vary by series largely due to the extent that fees and expenses may differ between series or as a result of varying inception dates. Please see *Past Performance* for the performance data of the other series.

As the Fund invests substantially all of its assets in an underlying fund, the Manulife Climate Action Fund, the following results of operations present information concerning the activities of this underlying fund.

The period from May 2025 to April 2026 was characterized by several dominant themes that shaped global equity markets. European equities approached all-time highs while US markets continued their upward trajectory, driven by AI investment optimism and strong earnings growth. However, markets faced significant challenges from evolving trade tensions, geopolitical conflicts including Iran-related energy shocks, and shifting central bank policies. Consumer behavior showed signs of stress with widening spending gaps between income levels, while compelling valuations in Europe versus the US created divergent investment opportunities across regions.

US equity markets demonstrated resilience despite facing multiple challenges throughout the period, posting positive returns. Trade policy remained volatile with Supreme Court's skepticism of Trump's IEEPA tariffs in oral arguments and various sectoral tariffs announced throughout the period. Geopolitical tensions culminated in March 2026 when conflict in Iran and the resulting oil shock weighed on sentiment, leading to broad-based market declines. Despite tariff turmoil in spring 2025 and conflict in the Middle East, the market was lifted by capital expenditure commitments related to artificial intelligence, three Federal Reserve rate cuts, and the passage of business-friendly legislation. The market's rally culminated in April 2026's 10% gain, the index's best single-month return since November 2020. Within the broad-based S&P 500 Index, the information technology, communication services, and consumer discretionary sectors posted the biggest gains for the 12 months, the real estate and energy sectors turned in virtually flat returns, and the health care sector declined. AI enablers including chipmakers, software names, and tech infrastructure firms fared very well, with notable developments including the announcement of a $100B investment by NVDA into OpenAI.

European equity markets demonstrated remarkable resilience throughout the period, with the STOXX Europe 600 achieving record closes and the strongest annual performance since 2021. European equities delivered resilient Q1 earnings with low single digit earnings per share growth, while third quarter earnings season opened on surprisingly solid footing with over half of companies delivering similar earnings per share growth. The region benefited from Germany's 500B infrastructure fund and record buybacks, though faced headwinds from the euro's 14% gain against the dollar. Trade tensions eased somewhat after Trump delayed planned tariffs, but Trump dramatically escalated tensions in late September affecting luxury brands and exporters. Strategist and investor sentiment reached record highs heading into 2026, supported by European equities trading at more attractive multiples when compared to the S&P 500. However, geopolitical tensions escalated to full Iran conflict energy shock in Q1 2026, creating inflation risks and hawkish central bank pivot.

The Fund lagged its benchmark during the period, with security selection serving as the primary driver of relative underperformance. Selection within financials, industrials, and information technology detracted most from results, reflecting challenges in identifying outperforming holdings in these

sectors. Sector allocation provided a modest offset, with positive contributions from overweight positions in information technology and industrials, as well as an underweight in materials.

Stock selections within the financials sector served as a drag on relative returns as holdings within the capital markets and insurance industries lagged. In capital markets, despite having reported healthy results during the first half of the year, shares of London Stock Exchange Group plc declined nearly 16% due to a slowdown in ASV growth in their data & analytics segment, with the market seemingly interpreting the slowdown being related to AI penetration fears.

Shares of insurance broker Brown & Brown Inc. were also a detractor as stock prices declined 25% during the period before being sold. Brown & Brown faced challenges in its second quarter, with organic growth slowing to low single digits from mid in the previous quarter, as all segments reported decelerated growth. Management attributed this to a softening insurance market, particularly in property and casualty lines, alongside moderating admitted insurance rates and declining non-admitted property rates, which pressured revenue growth.

In industrials, while overall returns were positive, a number of holdings experienced declines, including Wolters Kluwer NV, AECOM and Allegion Public Listed Company. Wolters Kluwer NV is a solid provider of information and professional software, but after strong multiyear outperformance, valuation multiples contracted, where capital was reallocated into peers with higher forward growth. AECOM declined 15% during the period as the company faced notable challenges in late 2025 as its Q4 results revealed weaker international performance, with international net service revenues missing analysts estimates. Additionally, the company announced a strategic review of its construction management business, potentially introducing near-term uncertainty as it shifts focus to AI-driven offerings. Shares of Allegion experienced pressure as the company faced increased costs of sales and higher administrative costs, pressuring operating margins despite revenue growth. While Allegion's Americas and International segments reported organic revenue growth, the market focused on the company's margin compression and rising costs, overshadowing positive sales trends.

In information technology, holdings within the IT services industry experienced headwinds as the exponential growth of AI left investors attempting to gauge the potential wins & losses for individual companies' operations as well as the winners and losers competing within the various industries and sectors. Two holdings to face such headwinds during the period included Salesforce Inc. and Capgemini SE, declining 4% & 8%, respectively. For Capgemini, while there is general pricing competitiveness in the market, it has been more the result of vendor consolidations and less so indirect competition as a result of AI. Despite having solid headline results in the first half of the year, softer gross margins and higher restructuring costs were enough to impact sentiment on the stock with respect to the role of IT services companies in an AI-driven world. Salesforce Inc. was another stock to face headwinds given the slight shift in sentiment. While the company recently unveiled the evolution of its Customer 360 platform to Agentforce 360, establishing AI agents and contextual data as the new core, investor excitement has waned as adoption has thus far lagged expectations, leaving investors to continue to speculate as to how much AI will serve to replace Software as a Service (SaaS) vs. extending its reach and capabilities. Both stocks were sold after an intra-period recovery, avoiding further downsides experienced by the stocks during the remainder of the period.

Conversely, contributing to relative and absolute returns were stock selections made within the consumer staples and communication services sectors. In consumer staples, defensive supermarkets operator Koninklijke Ahold Delhaize NV performed well during the quarter (+16%) as the company's "Growing Together" strategy remained on track, with recent results addressing a large part of the bear thesis overhanging the stock over the last 12 months, with the company highlighting a variety of growth levers available in its most recent earnings call. In communication services, Alphabet Inc. was a standout contributor during the period, rising 140%. The company reported outstanding results in its most recent quarter, with AI demand driving all segments of the business. Their first quarter's operating income growth was +30% with margins expanding across all segments, though free cash flow was negative $3 billion reflecting a doubling of capex compared to last year. Given the blow out results in Search and GCP, the company is likely generating strong return on invested capital on growth capex, and at this point should be considered a clear AI winner.

In terms of transactions, the Fund made notable purchases in shares of Amazon.com Inc., Avery Dennison Corporation, Keyence Corporation, Union Pacific Corporation, Waste Connections Inc. and Motorola Solutions Inc. After lagging some of its big-tech peers, the Fund purchased Amazon.com Inc. where 2025 checks continue to support 2025 AWS growth acceleration, even though ramping competition and capacity constraints likely limit incremental upside. The sub-advisor believes AWS will lead the foundational and middle layers of the gen AI/ML stack, while secular Cloud tailwinds will continue in 2025 and beyond. A stable cash-flow generator tied to packaging, labeling, and logistics supply chains, the fund also purchased Avery Denison Corporation. The company is seen as benefitting from secular e-commerce growth and pricing power in specialty labels; seen as a defensive industrial with margin resilience. Keyence Corporation engages in the development, manufacture and sale of industrial automation and inspection equipment. The stock benefited from a significant earnings beat, driven by robust overseas sales and new product launches, as well as plans for potential share buybacks and board changes.

Later sold in favour of Union Pacific following its announced acquisition of Norfolk Southern Corporation, Canadian National Railway experienced a 7% decline prior to its sale given the

more opaque outlook for volumes in light of increased tariff risk in North America. UNP's network is running well, demonstrated by record freight car velocity, terminal dwell, and train lengths, where management remains optimistic on the closing of its purchase of NSC. Other positions sold included Oracle Corporation, Medtronic Plc, Cisco Systems Inc. and Johnson Controls International plc. Oracle Corporation was sold after rising well over 30% on a year-to-date basis after valuations became quite stretched. While demand for the company's OCI services is expected to grow 40% higher in each of the next four years owing to growth in AI, free cash flow yields were poised to flirt with negative territory over the next 12-24 months, prompting its sale. Johnson Controls International plc and Cisco Systems was sold for profit taking purposes as the stock had become somewhat overvalued.

From a sustainability measurement perspective, the Fund was able to achieve a number of portfolio milestones during the Period, with greenhouse gas (GHG) intensity (tonnes GHG/$1 million revenues) ending at less than half that of the benchmark (approximately 51.1 vs. 109.8) when including scope 1 and 2 emissions and just over half that of the benchmark when measured including scope 1, 2 and 3 upstream emissions (135.3 for the fund vs. 207.4 for the index). In addition, approximately 82% of the portfolio was invested in companies that had committed to a Science Based Target aimed at reducing their carbon footprint, marking a decrease of 8% from the beginning of the Period.

With respect to engagements specific to the environment for securities held within the portfolio, the portfolio advisor had 19 notable company engagements occur during the Period, with companies Capgemini SE, Cencora Inc, McKesson Corporation, Intertek Group plc, Siemens Aktiengesellschaft, Allegion Public Limited, Union Pacific Corporation, Applied Materials Inc., Brown & Brown Inc., Waste Management Inc., Sysco Corporation, Amphenol Corporation, Roper Technologies Inc., WSP Global Inc., AECOM, Stryker Corporation, Microsoft Corporation, Keyence Corporation and Amazon.com Inc.

Committed to a Science Based Target (SBT) for emissions reduction, we asked management of AECOM to elaborate on the specific/ key climate initiative(s) that are expected to help them stay on track with respect to their GHG emissions target reduction, including elaborating on their exposure to climate risks and provide greater insight regarding their cleantech revenue measurement versus third party data providers. With Capgemini, we asked the company about why they view their carbon footprint more like an opportunity than liability. At present, the company's footprint is very small relative to the nature of their business, but still offers multiple diversified opportunities, including: helping their clients measure their carbon footprint although it bears some challenges; improvement of energy efficiency; and redesign of products from the supply chain to reduce the usage of sub-materials. With Cencora, we inquired as to a recent sharp increase in emissions (scopes 1 & 3), seeking clarity with respect to how they plan to reach their reduction targets given their commitment to having an SBT.

With McKesson, we inquired as to the company's climate adaptation initiatives given the potential climate and natural disaster risks to the company's operations and supply chains, a subject we often broach with companies where a measurable amount of risk may exist. We also engaged with respect to the future direction of the company's Scope 3 GHG emissions. We also engaged with Siemens to inquire as to how the company overcomes the challenges in aligning multiple teams to create a cohesive related sustainability strategy and whether a recent large capital investment (US$650M) in decarbonization initiatives had proven profitable. With Allegion, we asked the company for more insight around their stance on Science Based Targets (SBTs): What might be next new milestones and what are the most significant benefits from their decarbonization initiatives. With Union Pacific Corporation, we asked if the company could provide more disclosure around the impact /cost of wildfires on its assets in the next CDP disclosure while revisiting the company's decarbonization strategy. With Applied Materials, we inquired about a number of climate-related issues, including near-term milestones with respect to their 2030 carbon target and whether the company has taken any steps to engage suppliers with respect to their willingness to commit to an SBT. We also inquired about how much of the company's capital expenditures would focus on decarbonization initiatives and efforts to improve upon their water efficiency.

With insurance brokerage Brown & Brown, we strongly encouraged the company to improve disclosure around their decarbonization strategy: to disclose their GHG emissions publicly and within the CDP (Carbon Disclosure Project) and to endorse having an SBT (Science Based Target) targeting long-term emissions reductions. With Waste Management, we inquired as to the company's success with respect to its renewable natural gas (RNG) projects, a cornerstone of the company's climate strategy, internalizing use for most of the natural gas produced from their landfills. With Sysco Corporation, while providing us with an update on progress with respect to their decarbonization strategy, we encouraged management to use the TCFD framework, a similar approach to their current work on TNFD. This will ensure the inclusion of climate adaptation as part of their overall climate strategy. We also asked about their forthcoming sustainability report, inquiring if the company could disclose the percent of revenue derived from green revenue efforts. Electronical and fiber-optic company Amphenol was approached regarding their openness to adopting and committing to an SBT for emissions reduction as well as requesting greater disclosure with respect to the make up of the company's clean technology revenue. Finally, we met with diversified technology company Roper Technologies Inc. on a number of climate related issues, including expanding on their ability to disclose physical risks in the event of extreme climate events & disasters and how they hope to reduce Scope 3 GHG emissions, which represents most of their carbon footprint, in the future.

The Fund's net assets decreased to $41.6 million during the period from $44.2 million at the end of April 2025. The decrease in assets during the period can be primarily attributed to net redemptions. The portfolio advisor does not believe that redemptions had a material impact on the management of the Fund, since every effort is made to fund redemptions in a manner that optimizes the Fund's composition and positions it for the future.

Recent Developments

Global equity markets are entering a more complex and fragile phase, shaped by the interaction of geopolitical risk, structural economic shifts, and tighter financial conditions. The most immediate macro uncertainty stems from escalating tensions involving Iran, where periodic disruptions and the ongoing risk of escalation continue to place upward pressure on energy prices. Even in the absence of a sustained supply shock, elevated oil and gas prices are contributing to renewed inflationary pressures, complicating the path for central banks and raising the likelihood of a more prolonged "higher for longer" interest rate environment. This dynamic introduces a stagflationary undertone—slowing growth alongside persistent inflation—which historically has been challenging for equity markets, particularly in regions more sensitive to energy imports. Monetary policy remains a critical constraint across developed markets. While inflation moderated through parts of the prior year, recent geopolitical developments and resilient economic activity have slowed the expected pace of disinflation. As a result, central banks are likely to proceed cautiously, maintaining restrictive policy settings for longer than previously anticipated. Higher real interest rates continue to exert pressure on equity valuations, particularly for longer-duration assets, while also tightening financial conditions more broadly across credit and housing markets.

Overlaying these cyclical pressures is a more structural shift toward global trade fragmentation. The re-emergence of tariff policies, supply chain reshoring, and broader geopolitical competition are gradually reversing decades of globalization. This trend is likely to result in higher production costs, reduced efficiency, and more regionally segmented growth patterns. In North America, the upcoming review of the Canada–United States–Mexico Agreement (CUSMA) introduces an additional layer of uncertainty, particularly for Canada's export-oriented sectors. While a full renegotiation is not assured, even the prospect of changes to rules of origin, energy trade, or market access may weigh on business investment and cross-border capital flows. More broadly, geopolitical considerations are increasingly influencing economic and market outcomes. Beyond the Middle East, ongoing strategic tensions between major global powers—particularly in areas such as technology, energy security, and defense—are contributing to a more fragmented and less predictable global landscape. This environment is characterized by higher volatility, greater dispersion in market returns, and a reduced ability for policymakers to cushion shocks.

At the secular level, the global economy is navigating the early stages of a significant capital investment cycle driven by advances in Artificial Intelligence. While the long-term productivity benefits of AI remain compelling, the scale and pace of current investment—particularly in data centres, semiconductors, and supporting infrastructure—raise the risk that expectations have moved ahead of realized returns. This introduces the potential for capital misallocation and, in a downside scenario, a reassessment of earnings growth and valuation multiples, particularly in segments of the market where performance has been heavily concentrated. Equity market valuations and positioning (arguably) suggest a degree of underlying complacency. Market performance has been increasingly concentrated in a narrow group of large-cap growth companies, many of which are closely tied to the AI theme. While these companies continue to demonstrate strong fundamentals, the concentration of leadership increases vulnerability to shifts in sentiment or earnings expectations. In this context, the combination of elevated valuations, geopolitical uncertainty, and tightening financial conditions underscores a more asymmetric risk profile for global equities, where downside scenarios may be more pronounced should multiple risk factors materialize simultaneously. The sub-advisor has positioned the portfolio to navigate the ongoing volatility in equity markets, selectively re-allocating capital into companies where cash flows have proven to be more resilient and/or where the risk/reward warrants an investment based on its valuation. Risk management will continue to be a priority, with a focus on maintaining diversification and seeking companies with resilient fundamentals. The investment approach emphasizes disciplined security selection in companies with strong cash flow generation, aiming to capture upside potential while mitigating downside risks.

Related Party Transactions

Manager and Portfolio Advisor

The Fund is a class of shares of Manulife Investment Exchange Funds Corp.

Manulife Investment Exchange Funds Corp. has engaged Manulife IM Limited, an indirect wholly-owned subsidiary of The Manufacturers Life Insurance Company ("MLI"), to act as the Fund's manager. Manulife IM Limited performs the managerial functions and is responsible for the overall operations of the Fund and provides administrative services to the Fund including, but not limited to, reporting the net asset value of the Fund and its shares, preparing all offering documents for the Fund, and providing all services relating to issuing and redeeming shares of the Fund. From time to time, Manulife IM Limited may, on behalf of the Fund, enter into transactions or arrangements with or involving other members of the Manulife group of companies, or certain other persons or companies that are related or connected to the Fund.

The portfolio advisor is responsible for all investment advice provided to the Fund including providing investment analysis and recommendations, making investment decisions and arranging for the acquisition and disposition of portfolio investments including all necessary brokerage arrangements. Fees for providing these investment management services are included in the management fee.

The Fund paid approximately $547,000 in management fees for the period. For more information about the calculation of management fees, please see the *Management Fees* section in this document.

Fixed Administration Fee

Manulife IM Limited pays the operating expenses of the Fund, other than Certain Fund Costs (as defined below), in exchange for the payment by the Fund of a fixed rate administration fee in respect of each series. The fixed rate administration fee is calculated as a fixed annual percentage of the average net asset value of each relevant series of the Fund. The Fund paid approximately $134,000 in fixed rate administration fees for the period.

Operating expenses payable by Manulife IM Limited in exchange for the administration fees include, but are not limited to, the costs related to registrar, transfer agency and pricing, accounting and bookkeeping fees, audit and legal fees and expenses, safekeeping and custodial fees, administration costs and trustee services relating to registered tax plans, the costs of prospectuses, fund facts, financial reporting, and other types of communications that the Manager is required to prepare for the Fund so that the Fund complies with all applicable laws and regulatory filing requirements.

Certain Fund Costs include borrowing and interest costs, investor meeting costs (as permitted by Canadian securities regulation), the cost of compliance with any new governmental and regulatory requirements imposed on or after July 27, 2016 (including relating to operating expenses) or with any material change to existing governmental and regulatory requirements imposed on or after July 27, 2016 (including extraordinary increases to regulatory filing fees), any new types of costs, expenses or fees not incurred prior to July 27, 2016, including arising from new government or regulatory requirements relating to the operating expenses or related to those external services that were not commonly charged in the Canadian mutual fund industry as of July 27, 2016 and operating expenses that would have been outside the normal course of business of the Fund after July 27, 2016.

Certain Fund Costs are allocated proportionately among the relevant series. Certain Fund Costs that are specific to a series are allocated to such series. Further details about the fixed rate administration fee and the Certain Fund Costs can be found in the Fund's most recent Simplified Prospectus.

Participating Dealers

Manulife Investment Management Distributors Inc. and Manulife Wealth Inc., each a subsidiary of MLI, which is an indirect parent company of Manulife IM Limited, may sell securities of the Fund in the normal course of business. As such, they receive applicable sales commissions and trailing commissions paid by the Manager on the sale of securities of the Fund as outlined in the Simplified Prospectus for the Fund.

Transfer Agent

Manulife IM Limited is the transfer agent of the Fund. The transfer agent maintains the register of shareholders of the Fund. Manulife IM Limited was not reimbursed by the Fund for the period for the operating costs incurred in providing such services as these are covered by the Fixed Administration Fee.

Financial Highlights

The following tables show selected key financial information about the Fund and are intended to help you understand the Fund's financial performance for the period and for each of the past four years or, if shorter, the periods since the inception of the Fund. The information in the tables below is for the period from May 1 to April 30 of each year or the inception date to April 30 in the inception period, unless otherwise indicated.

Total increase (decrease) from operations[2]	1.29	1.06	2.40	(2.83)	(2.64)
Distributions:					
From income (excluding dividends)	-	-	-	-	-
From dividends	-	0.01	0.02	-	-
From capital gains	1.21	-	-	-	-
Return of capital	0.96	0.96	0.82	0.95	0.94
Total annual distributions[3]	2.17	0.97	0.84	0.95	0.94
Net assets, end of year	16.74	17.05	16.18	14.80	14.18

[1] This information is derived from the Fund's audited annual financial statements.
[2] Net assets and distributions are based on the actual number of shares outstanding at the relevant time. The increase/decrease from operations is based on weighted average numbers of shares outstanding over the financial period.
[3] Distributions were paid in cash/reinvested in additional shares of the Fund, or both.

Net Asset Value per share[1]($)	16.74	17.05	16.18	14.80	14.18

[1] This information is provided as at April 30 of the year shown, unless otherwise noted.
[2] Management expense ratio (MER) is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period and is expressed as an annualized percentage of daily average net asset value during the period. The Fund calculates its MER in accordance with regulatory requirements. The MER excludes any operating expenses waived or absorbed by the Manager, which may be discontinued at any time by the Manager at its discretion without notice.
[3] The trading expense ratio represents total commissions and other portfolio transactions costs expressed as an annualized percentage of daily average net asset value during the period. The Fund invests in securities of Manulife mutual funds (the "Underlying Funds"). The trading expense ratio is based on commission and other portfolio transaction costs of the Underlying Funds that are attributable to the Fund.
[4] The Fund's portfolio turnover rate indicates how actively the portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a portfolio turnover rate in the period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a portfolio.

Management Fees

The Manager is responsible for the day-to-day management and administration of the Fund. The Manager monitors and evaluates the performance of the Fund, pays for the investment management services of the portfolio advisor, commissions to registered dealers and arranges for the other administrative services required to support the Fund. Other administrative services include: marketing, advertising, product development, information technology, and general business services. As compensation for its services, the Manager is entitled to receive a management fee, which is calculated daily based on the net asset value of a series of the Fund from the previous trading day and payable monthly.

The Fund does not pay a management fee to the Manager for its Series O shares. Series O shareholders of the Fund pay a negotiated management fee directly to the Manager.

The following table shows the expenses paid out of the management fee expressed as a percentage of the management fee for the series of the Fund.

		Expenses Paid out of the Management Fee (%)	
Shares	Management Fee (%)	Dealer Compensation[1]	Investment Management, Administration and Other
Advisor Series	1.74	56.29	43.71
Series F	0.74	N/A	100.00
Series FT	0.74	N/A	100.00
Series T	1.74	57.87	42.13

[1] Dealer compensation represents cash commissions paid by the Manager to registered dealers during the period. This amount may, in certain circumstances, exceed 100% of the fees earned by the Manager during the period. For new funds or series, the amount presented may not be indicative of longer term operating periods.

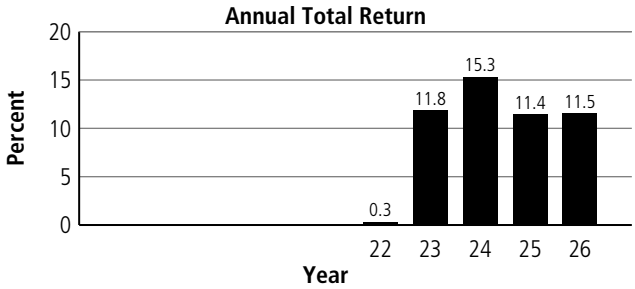

Past Performance

The performance information shown in the *Year-by-Year Returns* and *Annual Compound Returns* assumes that all distributions made by the Fund in the periods shown were reinvested in additional shares of the Fund. The past performance information does not take into account sales, redemption, distribution or other optional charges or income taxes payable by the shareholders that would have reduced returns or performance. For Series O shares, the past performance information also does not take into account the negotiated management fee that is paid by investors directly to the Manager. How the Fund performed in the past does not necessarily indicate how it will perform in the future.

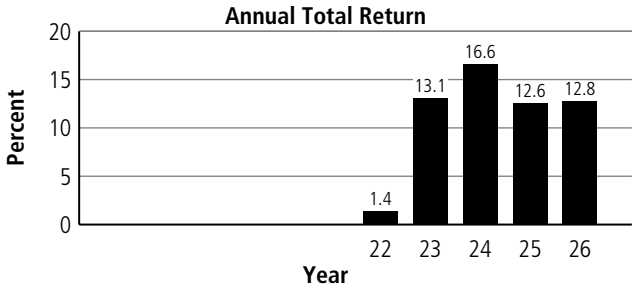

Year-by-Year Returns

The charts show you the Fund's annual historical return and how it changes each year. Annual return is the percentage change in the value of an investment from May 1 to April 30, unless otherwise noted. The charts show, in percentage terms, how much an investment made on the first day of each financial year would have grown or decreased by the last day of each financial year.

Annual Compound Returns

The tables that follow show the historical compound returns for securities of the Fund and the Benchmark for the periods shown. Annual compound return is the percentage change in value for the period shown, ending on April 30, 2026, assuming all earnings are reinvested each year.

The Benchmark tracks equity securities in developed markets around the world. The Benchmark is tracked in U.S. dollars and was converted from U.S. dollars to Canadian dollars using historical exchange rates.

Fund	11.5	12.8	10.0	10.0
The Benchmark	27.3	19.8	13.6	13.4

Comparison to the Benchmark

Performance will vary by series largely due to the extent that fees and expenses may differ between series. Since the Fund does not necessarily invest in the same securities as the Benchmark or in the same proportion, the performance of the Fund is not expected to equal that of its benchmark. A more in depth discussion of the performance of the Fund as compared to that of the Benchmark can be found in *Results of Operations*.
